

mcpspace User Guide

Manage MCP tools for your AI clients in one place

Desktop v0.1.0

1

Open a workspace

When you launch the app, an empty screen appears.

Click [Open Workspace Folder] to choose the project folder you want to manage MCP tools for.

mcpSPACE manages MCP tools per folder (workspace).

2

Initialize the workspace

If the selected folder has no config file, the initialization screen appears.

Click [Initialize] to create `.mcpspace/config.yaml` inside the folder and start managing tools.

3

The main screen

Once initialized, the main screen appears.

The top shows registered MCP tools; below are the AI clients (Codex, Claude Code, Cursor), the tools of the selected client, and the changes to apply.

Use the ? button at the top right for help.

4

Add MCP tools

Click [Add MCP] to open the add-tool dialog.

In the Catalog tab, search for common MCPs and select one — the command is filled in automatically.

Check the tools you want and click [Add Selected] to register them.

5

Diagnose (Doctor)

The [Doctor] menu on the left checks your workspace health at a glance.

It shows config validity, schema validation, sync status, each AI client config detection, backup status, and any warnings that need attention.

The screenshot displays the MCPspace Doctor interface, which is used to diagnose workspace health and configuration. The interface is divided into several sections:

- Left Sidebar:** Contains navigation options: Workspaces, Marketplace, Doctor (selected), and Settings. Below this, a list of workspaces is shown: test2 (D:\dev\test2) and my-project (D:\dev\my-project), with my-project selected.
- Doctor Header:** Displays the title "Doctor" and the subtitle "Diagnose workspace health and configuration." Below this, a "Warning" section indicates that warnings were found that should be reviewed. It also shows the workspace name "my-project", the last checked time "06/10/2026, 01:52:25 PM", and the last sync time "06/10/2026, 12:52:25 PM". A "Run Checks" button is present.
- Config File Check:** Shows the status "Healthy" and the message "Config file is valid YAML." It lists the path ".mcp-space\config.yaml" and confirms that the file exists, is readable, and the parse is valid.
- Desired State Validation:** Shows the status "Healthy" and the message "Configuration schema is valid." It lists the schema validation as "Passed".
- Sync Status:** Shows the status "Out of sync" and the message "1 client(s) are out of sync." It lists the status as "Out of sync" and the last sync time as "06/10/2026, 12:52:25 PM".
- Adapter Detection:** Shows the detected MCP adapters and client configuration files. It lists three adapters: Codex (Healthy, 2 tools), Claude Code (Warning, 1 tool), and Cursor (Not Detected, 0 tools).
- Backup Summary:** Shows the status "3 backup(s) available." and a "View Backups" button.
- Warnings:** A section for displaying any warnings that need attention.

6

Settings

The [Settings] menu on the left lets you tune the app.

Configure confirm-before-sync, auto backup, theme (System/Light/Dark), language (Korean/English), and auto-open the last workspace on startup.
